

★REDSTAR **PROTECT**

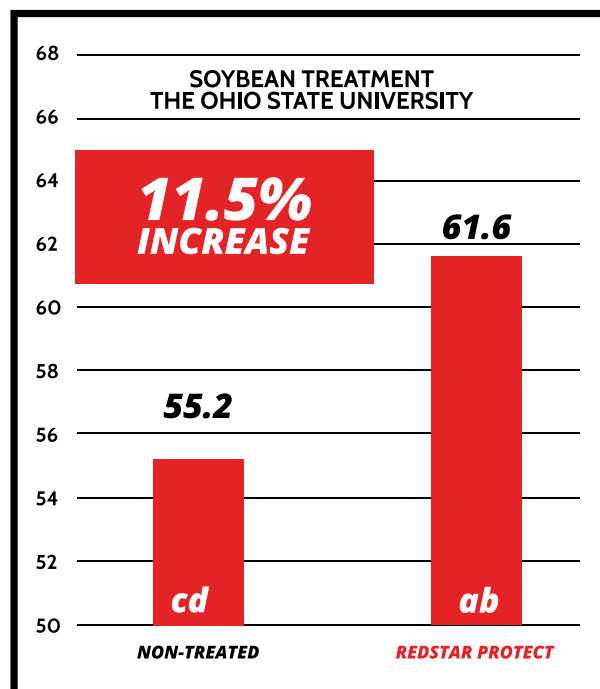

GAINING AN EDGE WITH SEED TREATMENT

PROTECT provides outstanding broad-spectrum disease and insect suppression, ensuring healthy crop development. Formulated with thiabendazole, a powerful compound that effectively targets soil-borne diseases, PROTECT also includes a colorant level that exceeds industry standards, giving your seeds a vibrant appearance.

The new-generation formulation is designed to be seed and equipment-friendly, eliminating issues with sticky beans and drum cleanout while offering exceptional seed safety without adverse effects on plant growth regulators (PGRs), unlike other triazole products. Additionally, PROTECT applies the correct hormones in precise ratios, maximizing the likelihood of uniform seed emergence. With these features, PROTECT not only enhances seed health but also promotes consistent growth and development in your crops.

BENEFITS

- < Enhanced germination and early seedling vigor.
- < Improved stand establishment.
- < Protects germinating seed from diseases in cool, wet soils.
- < Optimizes early nutrient and water uptake.
