

★REDSTAR **PROTECT** **COMPLETE**

PROTECT COMPLETE provides the same outstanding broad-spectrum disease and insect suppression with both inoculant and the power of PROPEL ST to ensure healthy crop development. PROTECT COMPLETE provides superior emergence of soybeans during cold and wet conditions by providing key nutrients, amino acids and peptides to keep seeds growing in the toughest conditions, while protecting the seedling from soil diseases. PROTECT COMPLETE powered by PROPEL ST gives your soybean genetics the key boost they need when planted early to get them out of the ground to deliver the most possible nodes to help maximize your yield.

BENEFITS

- < PROTECT COMPLETE combines bio-stimulants, amino acids, biologicals and nutrients to enhance seed germination for maximum plant stand.
- < Zinc, calcium and manganese are essential for enzyme activation, growth hormone production and robust seedling development after germination to help plants grow more efficiently during our cold spring weather conditions.
- < POWERED BY PROPEL ST means our bio-stimulants and nutrients work together allowing soybean seedlings greater resistance to pathogens, increased photosynthesis and more energy during early growth.

REDSTAR PROTECT COMPLETE combines a multi mode of action biostimulant, strong chemistry, long proven SAR technology to suppress soybean disease symptoms, & even under high disease pressure. Target diseases of SDS, White Mold, Rhizoctonia, and other late season diseases.

CROP DISEASES SUPPRESSED INSECTS SUPPRESSED

Soybean	Fusarium	Aphids
	Pythium	Seed Corn Maggots
	Early Season Phytophthora	Thrips
	Rhizoctonia Damping Off	Wireworm
	Rhizoctonia Seedling Blight	Three-Cornered Alfalfa Hopper
	Seed Borne Phomopsis/Sclerotinia	Overwintering Bean Leaf Beetle
	Sudden Death Syndrome (SDS)	
	White Mold
