

POWERED BY **NOVASTAR** AND **BioPHY**^{NEX}

PRECISION TECHNOLOGY THAT CAN GO ANYWHERE

PROSYNC delivers a balanced nutrient foundation directly to the seed for consistent, early-season performance across all crop types and soil environments. The blend of macro and micronutrients, humic and fulvic acids, sugars, and amino acids enhances early root growth, nutrient efficiency, and seedling vigor. Built for flexibility, PROSYNC can be used in any system, helping every acre start stronger, anywhere it's planted.

BENEFITS

- < Delivers essential starter nutrition, including Nitrogen, Phosphorus, Sulfur, Zinc, Iron, Manganese, and Calcium, directly to the seed for consistent earlyseason growth and uniform emergence.
- < Soy Protein Hydrolosates provide a natural source of short-chain amino acids that act as plant biostimulants, fueling microbial metabolism and enhancing seedling energy during early emergence.
- < The sugar source in PROSYNC provides a readily available energy source to stimulate early seed metabolism and jump-start beneficial microbial activity around the seed.
- < Designed for use in all planting systems –corn, soybeans, and specialty crops, PROSYNC integrates seamlessly into existing seed treatment or hopper box programs.
- < Leonardite-derived fulvic acids chelate micronutrients and stabilize microbial populations, improving nutrient transfer to the root zone and strengthening plant response under stress.
